

Review criteria

- **Database design - 35% (if using backend as a service e.g firebase,supabase then 15%)**
 - Schema Design (well-structured database schema with proper relationships, data types)
 - Real-time sync (WebSockets, polling etc.)
- **Coding Standards- 40%**
 - Data Validation - Proper validation of user inputs on both frontend and backend.
 - Dynamic Values (avoid hardcoding value)
 - Code Reusability - Write modular, reusable components or functions to avoid repetition and improve maintainability.
 - Performance - App load fast, minimal network calls (using cache, localStorage, cookies)
 - Error handling (handles invalid inputs and system errors , fallback messages)
 - Use a linter on your code to ensure coding standards are followed.
 - Complexity of the code (e.g. nested logic, algorithm use)
- **UI/UX Design - 15%**
 - **Responsive**
 - Pagination, breadcrumb
 - Search, Filter
 - Color combination proper (font color is proper with the background color)
- **Team Collaboration - 10%**
 - All team members are involved in coding.
